

## Omnilux Blue LED Phototherapy

### You are not alone...

Acne is one of the world's most common skin conditions, with as many as 85% of all men, women, and teenagers suffering from it by the time they reach 25.

Recurrent, persistent acne is often found in both men and women in their 30's & 40's, with as many as 1 in 20 adults estimated to be suffering from the condition, and can occur in

children as young as 10 or 11.

Image by laser are experienced in treating acne in people of all ages, from pre-teens to their late 40's, with trained staff, specialising in caring for your skin type.

In many cases persistent acne can prove to be stubbornly resistant to over-the-counter, and prescription

treatments, and often takes weeks, if not months to display any visible signs of improvement.

At Image by laser we are conscious of the emotional distress that acne can cause, rest assured that we are here to help guide you through the healing process towards a happy clean and clear future.

### What causes acne?

In most cases acne begins when you reach puberty; the body releases hormones such as testosterone (present in both men and women), which in turn stimulate the sebaceous glands in the skin to produce an oily substance called Sebum.

Sebum and dead skin cells (keratin) combine, and clogging the pores of the skin; when this occurs the natural skin bacteria Propionibacterium acnes (P.acnes) thrives, and the pore becomes enflamed as your bodies natural defences combat the infection – the result is acne.

In severe cases the wall of the follicles can rupture spreading the infection and resulting in scarring.

There are several factors that will aggravate acne, both environmental and hormonal that generally acts in one of two ways – either they assist in providing material to clog the pore, or they stimulate production of Sebum.

The more Sebum produced, the more likely it is that persistent acne will occur.

The trained staff at Image by laser are available to offer advice on how to best care for your skin on an on-going basis, ensuring that you achieve the best possible result from your treatment.

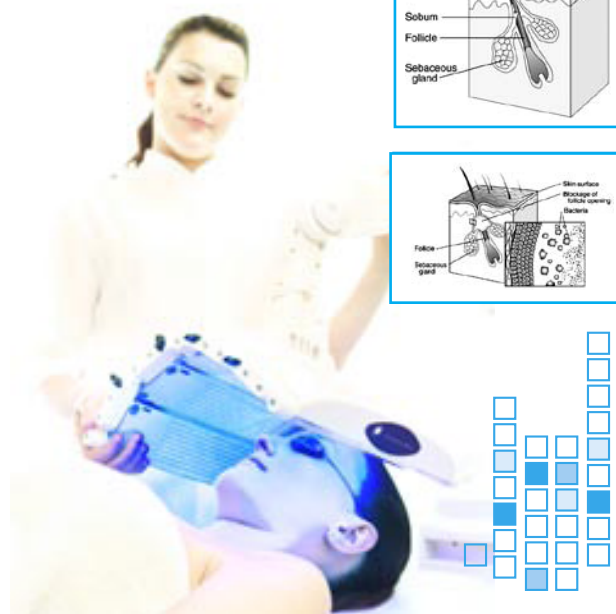

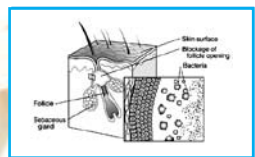

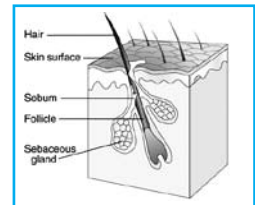

### The light at the end of the tunnel...

Omnilux Blue LED phototherapy is a breakthrough in acne treatment for persistent or stubborn acne sufferers.

Traditional treatments can be ineffective, and slow to show results, and hormonal treatments often reek havoc on the

body; Omnilux Blue LED phototherapy is a simple, pain free treatment that works with your bodies natural defences to eradicate acne in 8 x 20min light treatments (2 per week over 4 weeks).

P.acnes produce a light sensitive chemical called porpyrins, that when exposed to lights of a particular wavelength neutralise the bacterial infection – with no bacteria, the inflammation and redness subsides.

## What is Omnilux Blue LED Phototherapy, and how does it work?

Omnilux Blue LED Phototherapy is a light source that emits light at a particular wavelength. This light, made up of Light Emitting Diodes, or LED's, is specifically tuned to activate the porphyrins that naturally occur in the acne causing bacteria P.acnes, destroying the bacteria while simultaneously stimulating the cells in your body that assist in the healing process.

Omnilux Blue LED Phototherapy is pain free as the blue light does not produce heat, as in laser treatments, and will not damage the skin.

During the treatments, your Image by laser consultant will ask you to wear protective goggles to shield your eyes from the light, during the 8 x 20 min sessions.

Results vary with some subjects seeing a complete clearance of the lesions; although on average patients should expect a 73% clearance of lesions, with optimum results in about 4-8 weeks from the completion of the treatments.

## Preparing for Omnilux Blue LED phototherapy...

Your Image by laser consultant will discuss with you the various steps involved in the process of Omnilux Blue LED phototherapy when arranging your initial consultation, however there are several steps you can take prior to undertaking the treatment that will assist you in achieving your goals more quickly.

When coming in for your treatment sessions, it is important that your skin should be clean and any makeup is removed prior to commencing Omnilux Blue LED phototherapy. This will aid in the ability of the light to penetrate to the P.acnes beneath, providing you with a better result, more quickly.

Omnilux Blue LED phototherapy is the clear choice for acne treatment – a non-obtrusive, pain-free, and most importantly effective treatment that destroys the acne causing bacteria, and assists your bodies natural defences in combating the distressing condition.

With the most advanced equipment available, and highly trained and understanding staff, Image by laser is your solution to problem skin.

**Now that you have all the facts, contact your Image by Laser consultant today to discuss how Omnilux Blue LED Phototherapy can help you achieve beautiful, clean, and clear skin.**

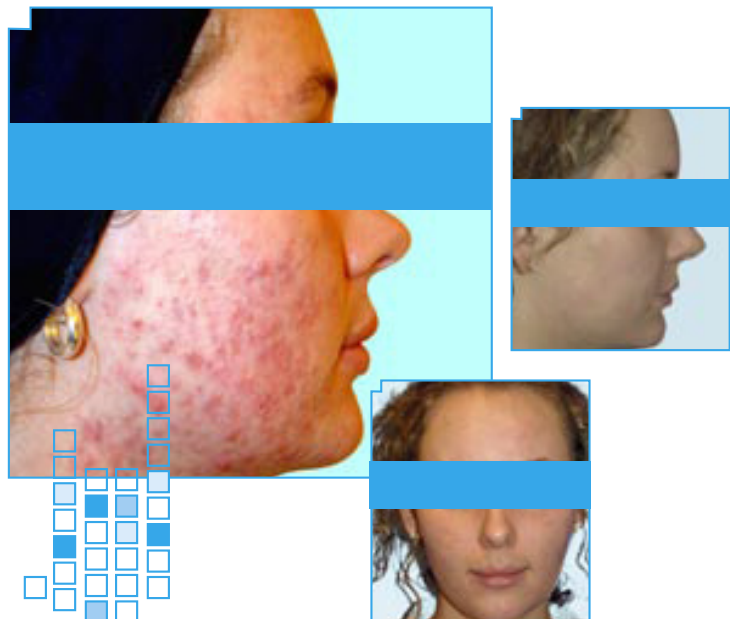

### Testimonials

*" For years I suffered from constant breakout and oily skin. The worst thing about having acne was I was ridiculed the whole time. People seem to treat you differently. Nobody seemed to understand. I had tried everything, doctors, dermatologists, it was only Image by Laser that got results, in just 8 simple treatments. Thank You Image by Laser!"*

**Tyler age 20**

*" Before discovering Omnilux Blue LED Phototherapy, I had tried everything, I tried antibiotics, Roacutane and had years of side effects and minimal results. I tried herbal medication with little or no effect, finally Image by Laser offered a safe, natural, treatment that really works. Melinda and the girls were incredible, they really care and my skin, well I still get a shock at how effective it was, I am a much happier confident person. I recommend it to anyone who has suffers from acne"*
