

## Photo Rejuvenation Therapy

One treatment for a combination of problems...

**Photo rejuvenation therapy, the exciting new breakthrough in skin treatment that treats a variety of skin conditions with one simple treatment is now available from Image by Laser!**

The ideal solution for pigmentation problems, sun damage, broken capillaries, acne scarring, rosacea, redness, and enlarged pores, Photo rejuvenation therapy utilises the

“The ideal solution for pigmentation problems, sun damage, broken capillaries, acne scarring, rosacea, redness and enlarged pores”

benefits of Intense Pulsed Light Technology to deliver precision pulses of broad spectrum light to the effected areas; penetrating the epidermal layers of the skin to specifically target the treatment zone.

The effectiveness of Intense Pulsed Light far exceeds that of the laser treatments of the past, with considerably less down time, and is often considered the most effective cosmetics treatment for the skin.

### What is Intense Pulse Light and how does it work...

Intense Pulse Light works by penetrating the epidermis, or top layer of the skin with a specific wavelength of light that targets to reach the dermis underneath in where melanin, hemoglobin, and collagen reside.

By leaving the surface layer of the skin undamaged the recovery, or down time, associated with traditional laser treatments is greatly reduced.

Intense Pulse Light stimulates the skins natural production of Collagen assisting in the recovery of the skin, and helping to reduce fine lines.

A highly advanced computer, operated by one of our experienced, and well trained technicians, regulates the wavelength of light being emitted administering the correct exposure safely to the face, neck, or chest.

### Photo rejuvenation, what's involved...

Your Image by Laser consultant will advise you that treatment times, and exposures may vary depending on the area, and condition being treated, however as a guide most treatments take 20 to 45 mins.

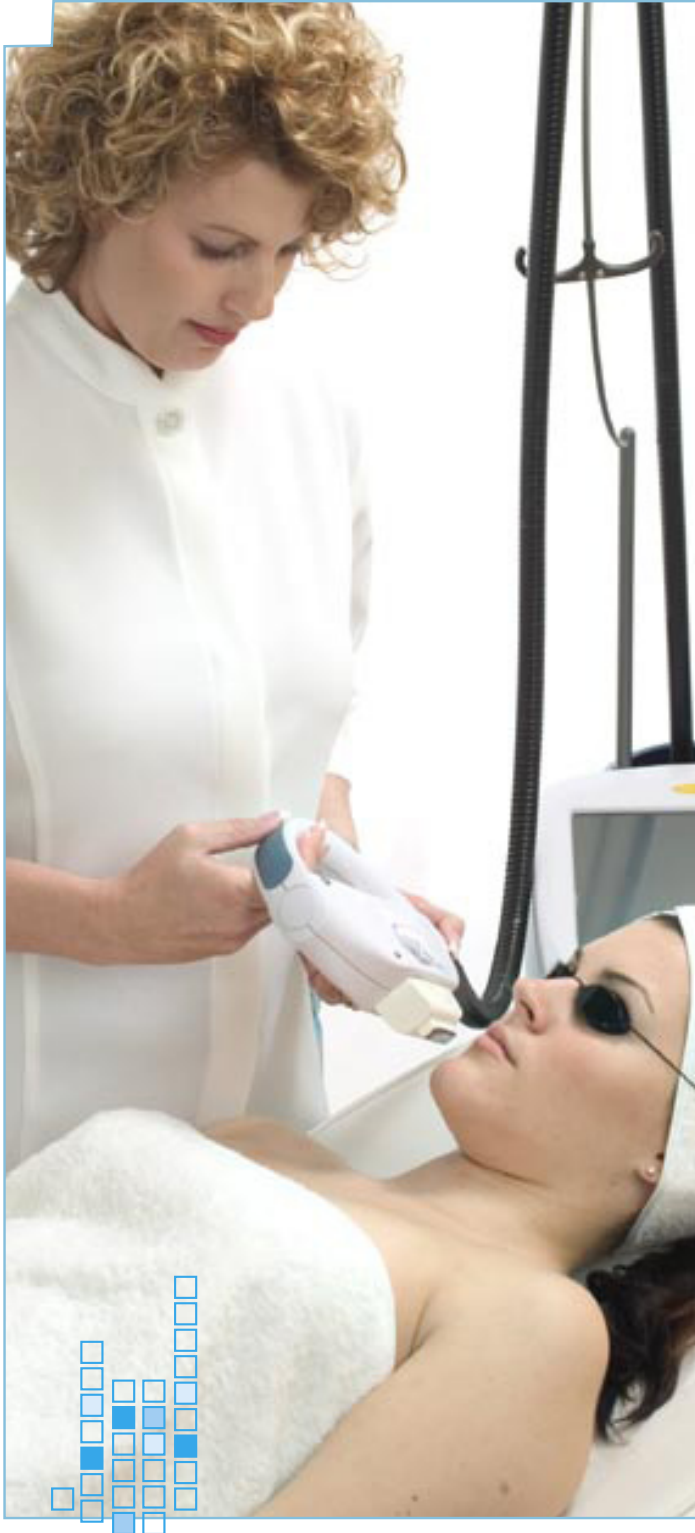

For best results, Photo rejuvenation therapy typically consists of a progressive series of four treatments at monthly intervals, the procedure is a pre-treatment (once we have pre-treated we can proceed within 24hrs), during which your Image by Laser consultant will ascertain the optimum level of exposure for your skin, and condition.

With the epidermis undamaged, you can apply make-up to the treated area directly after Photo rejuvenation therapy.

Costs vary depending on the duration of treatment required and the size of the treatment zone; prices are available on a consultation basis; your Image by Laser consultant will discuss your individual requirements and expectations with you.

## Caring for your skin...

Photo rejuvenation therapy will result in some temporary redness and inflammation of the skin, this is completely normal, however it is important that you take steps to maximise the benefits it can provide.

After undergoing Photo rejuvenation therapy keep the treated area cool and clean, wear a hat, and apply spf 30+ total sun block and minimise your exposure to the sun, and avoid the use of abrasive cleaning measures such as loofahs.

Your Image by Laser consultant will be available to offer any ongoing advice, and instruction should you have any queries.

**Image by Laser are pleased to make this exciting break through treatment for a variety of skin conditions to the people of Brisbane. Call and arrange a consultation today with one of our qualified, and experienced technicians to discuss how Photo Rejuvenation therapy can give you beautiful blemish free skin in just a few simple treatments.**

### Testimonials

*"I was always conscious of the broken capillaries around my nose, Image by laser treated them with Intense Pulse Light, the treatment was relatively painless and the results were amazing, I couldn't be happier, what I thought would be there for ever have magically disappeared. I should have done it years ago!"*

Brett age 30

*"Living with pigmentation on my face for many years started to get me down. Constantly wearing heavy make-up to try and hide the pigment marks. After trying Photo Rejuvenation I was over the moon with the results. My pigmentation was disappearing before my eyes. The feeling of having clear skin again was a dream come true!"*

Jayne age 35
